

ARUN R

Senior Consultant | Test Lead

Bangalore | +91 8610629672 | arunrajavallavan@gmail.com

PROFESSIONAL SUMMARY

Senior Consultant and Test Lead with 7.8+ years of experience in Mainframe Testing, Banking Domain Testing, API Testing, Quality Engineering, Automation, and Enterprise Banking Transformation Programs. Currently working with **Capgemini** for **ANZ Bank**, currently leading test strategy, release governance and quality assurance initiatives across mission-critical banking applications, driving successful delivery of digital transformation, migration, and regulatory change programs.

Expertise in **Core Banking Systems, Data Migration Testing, Deposit Banking, Customer Management, Payments & Cards Processing**, with strong technical capabilities across **COBOL, JCL, CICS, DB2, MQ, APIs, Hogan Banking Systems, Tosca Automation, and Excel VBA Automation**.

Extensive experience in analyzing Mainframe applications through **COBOL, JCL, CICS, DB2, and Rexx code reviews** to understand business functionality, perform impact assessments, and design comprehensive testing strategies. Proven ability to lead cross-functional teams, drive release readiness, manage risks, and deliver high-quality solutions across complex banking ecosystems.

Currently contributing to ANZ's strategic **Suncorp Migration Program**, supporting large-scale migration of customer, card, savings, and deposit banking products from Oracle Core Banking systems into ANZ's Hogan Mainframe platform while enabling modernization of batch-based processes into real-time online processing.

PROFESSIONAL EXPERIENCE

CAPGEMINI INDIA PVT LTD - Senior Consultant |

March 2019 – Present Client: ANZ Bank - Test Lead

Team: SUNCORP TO ANZ MIGRATION PROGRAM

Test Lead

- Leading testing activities for ANZ's strategic migration program involving migration of customers, Debit cards, savings, and deposit banking products from Suncorp Bank to ANZ.
- Validating migration of Customer, DDA (Savings Accounts), CDA (Term Deposits), and Card Banking data from Oracle Core Banking systems into ANZ Hogan Mainframe applications.
- Performing end-to-end migration validation through APIs, MQ integrations, ADMP pipelines, and file-based interfaces.
- Conducting reconciliation testing to ensure data completeness, accuracy, and business rule compliance throughout migration activities.
- Analyzing COBOL programs, JCL workflows, DB2 structures, and CICS transactions to understand migration functionality and design testing scenarios.
- Performing integration testing across upstream and downstream systems to ensure successful synchronization of banking data.
- Reviewing batch and online processing functionalities to validate business impacts and migration outcomes.
- Utilizing AI-assisted techniques to accelerate code analysis, impact assessment, requirement understanding, and test scenario creation.
- Supporting SIT, Regression Testing, Cutover Validation and Post-Migration Testing.

Key Achievements

- Played a key role in migration of Customer, Deposit, and Card Banking data from Oracle Core Banking systems into ANZ Hogan Mainframe applications.
 - Contributed to modernization initiatives by validating the transformation of batch-based processes into real-time online processing.
 - Reduced analysis and test design effort through AI-assisted functional understanding and scenario generation techniques.
-

Team: INTEGRATED DEPOSIT SYSTEM (IDS)

Test Lead | Hogan IDS Mainframe System

- Led end-to-end testing of Deposit Banking products within Hogan IDS supporting DDA (Savings Accounts) and CDA (Term Deposit Accounts).
- Performed Functional, SIT, Regression, and End-to-End Testing covering account creation, deposits, withdrawals, account maintenance, status management, overdraft processing, and new sub-product implementations.
- Validated transactions through Online Screens, IBM MQ Messages, APIs, DB2 databases, reports, and downstream file interfaces.
- Conducted extensive batch validation activities including interest accrual processing, maturity processing, financial reporting, reconciliation, and downstream file generation.
- Performed upstream and downstream integration testing to ensure accurate account and customer data synchronization.
- Worked closely with business stakeholders to validate product enhancements and regulatory changes.

CDA (Term Deposit) Lifecycle Testing

- Validated complete Term Deposit lifecycle including account creation, term selection, maturity processing, interest calculation, principal management, grace period handling, notice generation, waiver scenarios, immediate break processing, and account closure.
- Tested multiple deposit sub-products ensuring accurate financial calculations, maturity instructions, and settlement processing.
- Performed validations using DB2, reports, APIs, MQ messages, Mainframe screens, and downstream files.

Key Contributions

- Automated screenshot validation, report verification, and downstream file reconciliation using VBA-based utilities.
 - Improved testing efficiency through reusable automation components supporting savings and term deposit banking products.
-

Team: CORE TRANSACTION MANAGEMENT (CTM)

Test Lead & Test Analyst

- Led testing activities for debit card, credit card, ATM, POS, branch banking, and online banking transaction processing within ANZ's Core Transaction Management platform.
- Performed online transaction validation using IBM MQ by preparing request messages and validating MQ responses, CICS screens, DB2 tables, and application logs.
- Executed SIT, Regression Testing, and Batch Validation for fund transfers, bill payments, deposits, withdrawals, and card-based monetary transactions.
- Validated batch processes including Money Transfer Processing, VPLT, VPLD, ZAFIN Fee Processing, settlement activities, and downstream reconciliation files.
- Performed API Testing using Postman and Collection Runner for debit card and credit card maintenance services including replacement, reissue, activation, status changes, and maintenance operations.
- Conducted Base24 and ISO8583 validation for ATM and POS transaction processing.
- Worked closely with business and development teams for defect triage, impact analysis, and production support validation.

Key Contributions

- Developed Excel VBA automation utilities for MQ message generation and MQ response validation using copybook structures.
 - Automated online transaction validation, screenshot comparison, and downstream file verification activities.
 - Improved regression coverage while significantly reducing manual validation effort.
-

Team: CUSTOMER INFORMATION SYSTEM (CIS)

Test Analyst | Hogan CIS Mainframe System

- Led testing of customer onboarding and maintenance functionalities across Retail and Commercial Banking domains.
 - Validated customer creation journeys through CICS screens, APIs, and IBM MQ integrations.
 - Performed Functional Testing, SIT, and Regression Testing for customer profile updates including address, phone, email, customer type, credit rating, and relationship maintenance.
 - Validated customer-to-account maintenance processes and customer information synchronization across enterprise applications.
 - Performed backend validation using CICS screens, DB2 database verification, MQ responses, and downstream file reconciliation.
 - Executed upstream and downstream integration testing to ensure successful propagation of customer information.
 - Collaborated with business and development teams to resolve customer data quality and integration issues.
-

TEST LEADERSHIP & DELIVERY MANAGEMENT

- Led end-to-end quality assurance activities across multiple ANZ Banking applications ensuring successful delivery of business-critical releases.
- Owned test planning, estimation, execution tracking, resource coordination, risk management, and release readiness assessments and reviewed test scenarios, execution evidence, quality metrics, defect reports.
- Coordinated with Business Analysts, Product Owners, Developers, Architects and Migration Teams for successful project delivery.
- Facilitated defect triage meetings, prioritized critical defects, and drove timely resolution of high-severity issues.
- Led test strategy discussions for banking transformation programs, migration initiatives, regulatory implementations, and product enhancements.
- Mentored team members on Mainframe technologies, Banking Domain concepts, MQ Testing, API Testing, and Automation best practices.
- Delivered executive-level status reports, quality dashboards, defect metrics, and release updates to stakeholders and leadership teams.

- Promoted automation-first and AI-assisted testing approaches to improve quality, productivity, and delivery efficiency.

AI, AUTOMATION & INNOVATION HIGHLIGHTS

AI-Assisted Testing

- Utilized AI-assisted approaches for code analysis, requirement understanding, impact assessment, and test scenario generation.
- Leveraged AI tools to accelerate understanding of COBOL programs, JCL workflows, API integrations, business rules, and migration functionalities.
- Used AI for test planning activities, scenario design, functional validation coverage, and quality reviews.

Automation Contributions

- Developed Excel VBA automation frameworks for Mainframe transaction validation.
- Created reusable MQ message generation and validation utilities using Mainframe copybook structures.
- Automated screenshot capture, online validation, report verification, and downstream file reconciliation processes.
- Built reusable Postman collections and leveraged Collection Runner for API regression execution.
- Developed and executed TOSCA automation scripts for Mainframe business process validation.
- Currently developing Playwright automation capabilities for modern web applications and next-generation test automation frameworks.
- Improved release quality and reduced execution effort through automation-led quality engineering initiatives.

KEY ACHIEVEMENTS

- Progressed from **Test Analyst** to **Test Lead**, currently serving as **Senior Consultant** at Capgemini.
- Successfully led quality assurance activities across ANZ's mission-critical banking platforms including IDS, CTM, CIS, and Suncorp Migration Program.
- Delivered multiple enterprise banking releases with Zero production defect leakage.
- Built automation solutions that significantly reduced manual testing effort and improved execution efficiency.
- Developed strong expertise across Customer Management, Deposit Banking, Payments, Cards, Mainframe Systems, APIs, MQ Integrations, and Banking Data Migration.
- Contributed to real-time banking transformation initiatives by supporting the migration of batch-dependent functionality into online processing solutions.
- Trusted by stakeholders to provide release readiness recommendations and quality sign-off decisions for business-critical implementations.

TECHNICAL SKILLS

Mainframe Technologies

- COBOL
- JCL
- CICS
- DB2
- VSAM
- Rexx Programming
- TSO/ISPF
- SDSF
- IBM MQ
- Hogan IDS
- Hogan CIS
- VisionPlus

Testing & Quality Engineering

- Functional Testing

- System Integration Testing (SIT)
- Regression Testing
- End-to-End Testing
- Batch Validation
- UAT Support
- Production Validation
- Data Migration Testing
- Defect Management
- Root Cause Analysis

API & Integration Testing

- REST API Testing
- Postman
- Postman Collection Runner
- IBM MQ Testing

- File-Based Integration Testing
- Data Reconciliation

Automation

- TOSCA Automation
- Excel VBA Automation
- Regression Automation
- Automated Validation Frameworks
- Playwright (Basic Knowledge)

Methodologies & Tools

- Agile Scrum
- JIRA
- Confluence
- HP ALM / Quality Center
- File-AID

EDUCATION

Bachelor of Engineering (Computer Science Engineering) -65 %
Saveetha School of Engineering – 2018

Higher Secondary Education (12th Standard - Bio-Math's) – 64 %
Sri Matha Matriculation Higher Secondary School -2014

Secondary School Education (10th Standard) - 70%
